

Please create the page attached with this document.

Required tools:

- <https://create-react-app.dev/>
- <https://www.highcharts.com/>
- <https://www.npmjs.com/package/highcharts-react-official>
- <https://iexcloud.io/> (for data, you'll need to create a free account)

For company data (at the top of the page), use <https://iexcloud.io/docs/api/#quote> endpoint and **latestPrice**, **change** and **marketCap** fields. You can hardcode the **Earnings** value. This section should update its data twice every minute.

For chart data, use <https://iexcloud.io/docs/api/#historical-prices> endpoint. For the line, use the **close** field. For the bars at the bottom of the chart use the **volume** field (ignore the colors of the bars and use only one color).

Due to the limited amount of free API credits, don't implement any functionality for the filters at the top-left of the chart. Only request data for one month and make that button the default.

The date range filter at the top-right of the chart should work.

It's not expected that the colors, font and spacing should match exactly the design, but make sure the page looks good on mobile.

You can use any additional tools you consider necessary.
